

SAP2Printix

Uncomplicated serverless printing
from the SAP® system

Is migrating to the cloud part of your company's strategy, but you still need a Windows server to print from the SAP® system? With the BECONEX [SAP2Printix](#) application for Tungsten [Printix](#), you can now completely migrate your print management infrastructure to the cloud.

Remove print servers

Printix removes the need for costly legacy print servers, by hosting all infrastructure and configuration in the cloud. This reduces the cost, simplifies IT management, and increases productivity.

SAP2Printix integrates Printix as external Output Management System for SAP®, eliminating the need for print servers or an on-prem OMS solution. As a result, you can efficiently manage all office and SAP® print jobs directly in the cloud.

One universal solution

Printix works “out of the box” for all major brands of printers and MFPs. It extends the same high quality printing service from head office to any branch, regardless of location, and supports multiple user types from staff and students to visitors and remote users.

SAP2Printix is supported for all SAP® NetWeaver ABAP solutions like SAP® ECC and SAP® SCM including SAP S/4 HANA® on-prem and SAP S/4 HANA® Cloud (private edition).

Minimum implementation effort

Printix can auto-discover the printer network with intelligent printer driver selection and automatically set up print queues by location, group, or self-service for greater efficiency. It provides convenient and flexible access to any printer from any device.

Introducing SAP2Printix is no big SAP® project. You can configure the solution with only a few steps and start managing and monitoring print jobs from the SAP® system in no time.

Maximum flexibility

SAP2Printix puts all the capabilities of the Printix solution to the reach of the SAP® system: easy device discovery across sites and networks, direct and secure print scenarios as part of the business logic, reporting based on data analytics, and much more.

Whether an SME or a large corporation, SAP2Printix covers the whole spectrum, as it supports both single-tenant and multi-tenant configurations of the Printix environment.
